

Day 45

“CLOUD SECURITY”

Ensure that Amazon S3 buckets are Encrypted with Customer-Provided AWS KMS CMKs:

Steps:

Look for S3:

Create a bucket:

Open the bucket:

The screenshot shows the AWS Management Console interface for the 'fortestofkms' bucket. The top navigation bar includes the AWS logo, a search bar, and account information. The breadcrumb trail shows 'Amazon S3 > Buckets > fortestofkms'. The 'Objects' tab is selected, displaying a list of objects (0). The page includes a search bar, a table with columns for Name, Type, Last modified, Size, and Storage class, and an 'Upload' button.

Open the 'properties':

The screenshot shows the AWS Management Console interface for the 'fortestofkms' bucket. The 'Properties' tab is selected, displaying the 'Bucket overview' section with details like AWS Region, Amazon Resource Name (ARN), and Creation date. The 'Bucket Versioning' section shows it is disabled.

Scroll down to "default encryption":

The screenshot shows the AWS Management Console interface for the 'fortestofkms' bucket. The 'Properties' tab is selected, displaying the 'Default encryption' section with details like Encryption type and Bucket Key.

Following screen will appear:

Choose the KMS key:

Following confirmation will occur:

Done!

Ensure AWS S3 Buckets Enforce Server-Side Encryption (SSE):

Steps:

Open the bucket:

Change the available option to:

Done!
