

**Day 46**

## **“CLOUD SECURITY”**

### **Grant Private Access to EBS Volume Snapshot:**

Steps:

Look for EC2:

Navigate to Elastic Block Store and click on Snapshots:

Click on “create snapshot”:

**Create snapshot** [Info](#)

Create a point-in-time snapshot of an EBS volume and use it as a baseline for new volumes or for data backup. You can create snapshots from an individual volume, or you can create multi-volume snapshots from all of the volumes attached to an instance.

**Source**

**Resource type** [Info](#)

☒ **Volume**  
Create a snapshot from a specific volume.

☐ **Instance**  
Create multi-volume snapshots from an instance.

**Volume ID**  
The volume from which to create the snapshot.

Select a volume

**Snapshot details**

**Description**  
Add a description for your snapshot.

255 characters maximum

Fill the form:

**Create snapshot** [Info](#)

Create a point-in-time snapshot of an EBS volume and use it as a baseline for new volumes or for data backup. You can create snapshots from an individual volume, or you can create multi-volume snapshots from all of the volumes attached to an instance.

| <input type="checkbox"/> | Name | Snapshot ID            | Full snapshot size | Volume size | Description          | Storage tier | Snapshot status |
|--------------------------|------|------------------------|--------------------|-------------|----------------------|--------------|-----------------|
| <input type="checkbox"/> |      | snap-0c5ef1f2038b6b418 | -                  | 8 GiB       | created for practice | Standard     | Pending         |

Select a snapshot above.

Select the snapshot, click on Modify permissions:

Following screen will appear:

Since, it is private, it is not need to be changed.

Done!

## Create Encrypted EBS Volume:

Steps:

Look for EC2:

The screenshot shows the AWS Management Console for the Asia Pacific (Mumbai) region. The left sidebar lists various services, with EC2 selected. The main content area displays the 'Resources' section, showing a summary of EC2 resources in the region. Below this, there are sections for 'Launch instance', 'Service health', and 'Account attributes'.

| Resources           |   |                     |   |                       |   |
|---------------------|---|---------------------|---|-----------------------|---|
| Instances (running) | 0 | Auto Scaling Groups | 0 | Capacity Reservations | 0 |
| Dedicated Hosts     | 0 | Elastic IPs         | 0 | Instances             | 1 |
| Key pairs           | 1 | Load balancers      | 0 | Placement groups      | 0 |
| Security groups     | 3 | Snapshots           | 0 | Volumes               | 1 |

**Launch instance**  
To get started, launch an Amazon EC2 instance, which is a virtual server in the cloud.  
[Launch instance](#) [Migrate a server](#)

**Service health**  
[AWS Health Dashboard](#)  
Region: Asia Pacific (Mumbai)  
Status: ✔ This service is operating normally.

**Account attributes**  
Default VPC: none  
Settings: [Data protection and security](#), [Allowed AMIs](#)

Click on “volumes”:

The screenshot shows the AWS Management Console for the Asia Pacific (Mumbai) region, specifically the 'Volumes' page. The left sidebar lists various services, with EC2 selected. The main content area displays the 'Volumes (1)' section, showing a table of volumes. Below this, there are sections for 'Fault tolerance for all volumes in this Region' and 'Snapshot summary'.

| Name | Volume ID             | Type | Size  | IOPS | Throughput | Snapshot ID     | Created                    |
|------|-----------------------|------|-------|------|------------|-----------------|----------------------------|
|      | vol-0de1f6c9cd53f43e2 | gp3  | 8 GiB | 3000 | 125        | snap-04e9e6e... | 2025/09/14 18:31 GMT+5:... |

**Snapshot summary**  
Recently backed up volumes / Total # volumes  
**1 / 1**  
Last updated on Sun, Sep 14, 2025, 06:38:36 PM (GMT+05:30)  
Data Lifecycle Manager default policy for EBS Snapshots status  
No default policy set up | [Create policy](#)

Click on “Create volume”, following screen will appear:

The screenshot shows the AWS Management Console 'Create volume' page. The breadcrumb navigation is 'EC2 > Volumes > Create volume'. The page title is 'Create volume' with an 'Info' link. Below the title is a subtitle: 'Create an Amazon EBS volume to attach to any EC2 instance in the same Availability Zone.' The 'Volume settings' section contains the following fields:

- Volume type**: General Purpose SSD (gp3)
- Size (GiB)**: 100 (Min: 1 GiB, Max: 16384 GiB)
- IOPS**: 3000 (Min: 3000 IOPS, Max: 16000 IOPS)
- Throughput (MiB/s)**: 125 (Min: 125 MiB, Max: 1000 MiB, Baseline: 125 MiB/s)
- Availability Zone**: ap-south-1a

The footer of the console shows 'CloudShell', 'Feedback', and copyright information for 2025.

Scroll down to make it encrypted:

This screenshot shows the 'Encryption' section of the 'Create volume' page. The 'Encryption' section has a subtitle: 'Use Amazon EBS encryption as an encryption solution for your EBS resources associated with your EC2 instances.' The 'Encrypt this volume' checkbox is checked. The 'KMS key' dropdown is set to 'Test\_key\_forcs'. Below this, the 'KMS key description' is 'Key created in order to test the concept of cloud security.', the 'KMS key owner' is '886436970254 (This account)', the 'KMS key ID' is 'd3d82c56-5755-4690-9d31-d3b117be479c', and the 'KMS key ARN' is 'arn:aws:kms:ap-south-1:886436970254:key/d3d82c56-5755-4690-9d31-d3b117be479c'. A blue information box at the bottom of the encryption section states: 'Volumes that are created from encrypted snapshots are automatically encrypted using the same key as the snapshot, or using a different key that you specify. Volumes that are created from unencrypted snapshots are automatically unencrypted, but you can choose to encrypt them using a specific key. If no snapshot is selected, you can choose to encrypt the volume and specify your own key. [Learn More](#)'.

Done!

--The End--
